Right to work in the UK until 2028 — Graduate Route Visa (no sponsorship required)

PROFILE

Full-stack Software Engineer (MSc Computer Science, Coventry University – graduating June 2026) with hands-on experience building scalable web applications using Java, React, Node.js, PostgreSQL, and modern cloud-native tooling. Strong CS fundamentals demonstrated through 800+ LeetCode problems across algorithms, graphs, trees, and dynamic programming. Experienced in Agile delivery, CI/CD, REST API design, real-time systems, and clean, maintainable code. Comfortable using AI-assisted coding tools (Cursor / GitHub Copilot) to accelerate development and improve code quality

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, HTML5, CSS3, GSAP

Backend: Node.js, Express.js, Spring Boot, Socket.IO, REST APIs

Databases: PostgreSQL, MySQL

Tools: Git, GitHub, CI/CD pipelines, Vercel, Railway, basic AWS (EC2, S3, Lambda)

Practices: Agile/Scrum, OOP, Multithreading, DSA, RBAC, SOLID Principles

Testing: JUnit, Unit Testing, Integration Testing

EXPERIENCE

Full-Stack Developer | Coventry University — Software Engineering Project *May 2025 – Sep 2025*

- ▶ Built a production-ready academic web app using React.js, Node.js, Express, and PostgreSQL, serving real-world workflows for university staff and students.
- ▶ Engineered RESTful APIs with JWT authentication and role-based access control (RBAC), cutting average API response time by 25% through query optimisation.
- ▶ Designed a reusable component architecture with centralised state management; reduced duplicate code by over 30% across the frontend codebase.
- ▶ Delivered features across a 4-month Agile/Scrum cycle — participated in sprint planning, backlog refinement, and Git-based peer code reviews.

PROJECTS

Notes Sharing System — *React, Node.js, Express, Socket.IO* — *deployed on Vercel & Railway* [Github](#)

- ▶ Built real-time, bidirectional notes synchronisation across mobile and desktop using Socket.IO, supporting 10+ concurrent users with no data loss.
- ▶ Optimised socket event handling and state diffing, improving sync performance by ~10% under load.
- ▶ Configured end-to-end CI/CD pipeline (Vercel for frontend, Railway for backend) with environment-based secrets management.

Multi-Client Chat Server — *Java, Multithreading, Sockets*

[Github](#)

- ▶ Implemented a TCP chat server supporting 10+ concurrent clients using Java's ExecutorService for thread-safe socket communication.
- ▶ Reduced message broadcast latency by 30% via a shared lock-free message queue; wrote a full JUnit test suite covering all core server logic paths.

Point-of-Sale (POS) System — *React.js, JavaScript, CSS*

[Github](#)

- ▶ Refactored a monolithic POS codebase into modular components (CartPanel, PaymentModal, JournalView), cutting per-component complexity by 40%.
- ▶ Added real-time cart updates, payment validation, and a retry flow for failed transactions — significantly improving UI responsiveness and error recovery.

EDUCATION

MSc Computer Science | Coventry University, UK

2024 – June 2026

B.Tech Information Technology | Anna University, India

2020 – 2024
